The first AutoCAD platform was the MicroCAD platform, a dedicated CAD/CAM package for the MITS Altair 8800 microcomputer that had a built-in LCD screen and an internal bitmap graphics board. The first major release of AutoCAD for the MicroCAD platform was the 1983 release 1.0. All of AutoCAD releases prior to version 2015 use the MicroCAD platform. Introduction to AutoCAD AutoCAD is a typical general purpose 2D drafting/CAD application. It's an ideal software package for 2D drafting and designing, and is also used as an advanced 3D modeler. There are four primary types of objects in AutoCAD: Lines, which are vectors Charts, which are 2D shapes Dimensions, which control scale and the position of other objects Text, which is used to annotate and add notes to an object Lines, text, and dimensions are typically displayed on the screen as graphical objects and lines in an editable, two-dimensional space, but it is possible to transfer data to other programs such as 3D CAD packages using the bridge function. Objects in AutoCAD are also represented in 3D as various AutoCAD graphic objects such as dynamic 3D objects. Lines are not restricted to 2D drafting. They can be used to represent edges and contours in 3D as well. The core drawing functions of AutoCAD are based on the concept of the command line, including the use of a prompt ("pl") that determines what happens next. Commands are entered in a horizontal line of text, one command at a time. Each command may be preceded by a command name and a command number that indicates the order in which the command was defined. To execute a command, the user types "1" (for "command one"), "2" for command two, and so on, with a space separating each command name. Commands are grouped in menus, which are displayed at the top of the screen as a series of menu bars, each of which has a command number, and a graphic object (menu bar item) on top of it. Commands are available through the menus (see below), or by using shortcut keys (hot keys) on the keyboard. Commands such as "cross" can be accessed by the user using the right arrow key, but users must know the

Furthermore, support for newer software products can be requested and may be provided through third parties. Autodesk support Autodesk offers limited support for free use of their software. Registered users may have technical support from Autodesk, either via their website or their phone lines. In addition, as of September 2009, Autodesk offered paid (one-time) technical support for the A360 architecture platform. Autodesk is also a registered reseller of Autodesk Authoring Tools, and carries a full range of upgrades and support services. History AutoCAD was originally developed as a stand-alone product and was originally released for personal computers under the trade name AutoCAD. It was then extended to the AutoCAD LT which could be used on workstations without a monitor or mouse, and subsequently to the AutoCAD R14 for the Mac platform. The product was first developed by AutoDesk in 1981, and is currently developed by Autodesk. The name AutoCAD is used on three versions: AutoCAD 2015, AutoCAD LT 2013 and AutoCAD R14 for Mac 2015. AutoCAD 2002 was introduced in 1995 and provided support for DWG. AutoCAD Civil 3D introduced a DWG-based drawing format in 2006. AutoCAD Architecture was released in 2009. AutoCAD Electrical was released in 2011, AutoCAD Mechanical in 2012, AutoCAD Plant 3D in 2013, and AutoCAD Architecture 2.5 in 2014. AutoCAD LT 2013 was released on November 1, 2012. AutoCAD R14 for Mac 2015 was released on April 1, 2015. AutoCAD 2017 was released on December 1, 2016. The last version of AutoCAD as of September 2017, was AutoCAD 2018. Q: Closing all modal dialogs on a page I've got some modal dialogs on a page that get loaded when a link is clicked: Open Modal Modal dialog Some text × These are all loaded on a page as: `$('.modal').dialog({ width: 600, height: 500, modal: true, buttons: { "Ok": function () { $(this).dialog("close"); } } });` What I want is for any opened modal dialog to be closed when a link is clicked that links to the page in question. This would be in place of closing the dialog window via the "Ok" button. Is this possible? A: You can use the event `'show.bs.modal'` for that. `$(a[data-toggle=modal]).on('show.bs.modal', function () { $(this).modal('hide'); });` The click event will take care of the normal button click. `$(a[data-toggle=modal]).on('click', function () { $(this).modal('hide'); });` Q: Determining if a value in a Pandas DataFrame is an element of a set of values Let's say I have
