Q: ASP.NET MVC 5 global css How do you globally add a CSS file to an ASP.NET MVC 5 project? I have the following folder structure, I want to add a global css file to the application called app.css, which I have the following code, @Styles.Render("~/Content/app.css") However when I run the application I get, Cannot locate resource "~/Content/app.css". I have tried the following but it just didn't work, Adding it to the BundleConfig inside the global.asax.cs file as, bundles.Add(new StyleBundle("~/Content/Global/Css/app.css").Include("~/Content/Global/Css/app.css")); Adding it to the _Layout.cshtml.cs file, @Styles.Render("~/Content/app.css") A: You need to do it in Global.asax.cs or _Layout.cshtml.cs add this code in your Global.asax.cs file : BundleTable.Bundles.Add(new StyleBundle("~/Content/Global/Css/app.css").Include("~/Content/Global/Css/app.css")); and add this code in your _Layout.cshtml.cs file : @Styles.Render("~/Content/Global/Css/app.css") Phospholipid changes in acute lymphoblastic leukemia with nifedipine: a possible mechanism for the differentiation of lymphoblasts. The phospholipid (PL) composition of total cellular lipids and

The School Of Textiles And Fashion Management, formerly known as the B.Sc. Textiles and Clothing Technology degree, is a bachelor's degree offered by approximately 30 public universities. Instead of a large, eight-year-course of study in textiles, the school offers a curriculum covering a mix of arts and sciences, including fiber science, chemistry, biology, physics and mathematics. Students majoring in textiles can choose from a number of specializations ranging from apparel and fashion design to textile engineering. The school leads its M.Arch. and Ph.D. programs jointly with the University of Limerick and has collaborated with such educational institutions as Cornell University and the University of South Carolina. In 2008, the Department of Education named the School of Textiles and Fashion Management as the "Best Graduate School in the State of Maryland." e79caf774b

On Tuesday, Russian Defense Minister Sergei Shoigu announced a suspension of an August 9 agreement with the US for the Syrian Kurdish militia, saying Moscow was "unhappy" over Washington's involvement in a planned Turkish military operation targeting the militia. "We don't need such an example being set, that anyone can leave the Syrian settlement and redraw

A: The data is not SQL, but VBScript. Here's some code that you could use to parse the file using something like PHP's fgetcsv():

```
$file = 'mysql://user:pass@localhost/database/data.txt'; $data = []; $columns = ['data']; foreach (preg_split('~\r* ~u', file_get_contents($file)) as $line) { $line = trim($line); $line = trim(explode('|', $line)); if (!empty($line)) { $line = explode('|', $line); foreach ($line as $column) { $columns[] = [$column, 'int']; } $data[] = [$columns, $line]; } } $columns = array_keys($data[0]); foreach ($data as $row) { print " "; foreach ($row as $column => $value) { $col = $columns[$column]; $value = intval($value); if ($col == 'data') { print $value." "; } else { $value = implode(' ', array_map(function ($v) { return str_pad($v, 5, '0', STR_PAD_LEFT); }, $value)); print $value." "; } } print " "; } This yields the following: 1 1 1 2 1
```
